

ABSTRACT OF THE DISCLOSURE

5 A method and system for creating a fully accessible display object is disclosed,
that may advantageously be used to provide a fully accessible object within a modal
dialog box displayed in association with Web page. A fully accessible object is formed
using an image command, and associated parameters, within a document containing
formatting information for a user interface. The image command associates a graphical
10 image with an software script event handler used to respond to keyboard actions of the
user, such as pressing the enter key, as well as mouse actions, and also enables screen
reader program access to the object. The display object formed with the disclosed
system may be specifically identified and accessed with respect to the other objects of the
modal dialog box through use of a the tab key on the keyboard.
